30 Cycles of PCR With External Primers

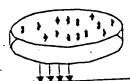

For the first term of the firs

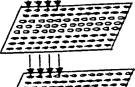

The first state of the first sta

## Viral Delivery:

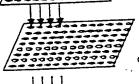

Bacterial colonies containing AAV-ZFP plasmid.
Each colony contains a single lib rary member

Small scale bacterial cultures in 96 well arrays

Transfection of AAV-ZFP plasmid and helper plasmid onto 293 cells in matched arrays

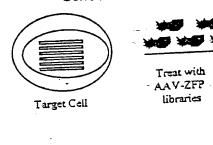

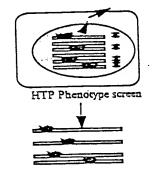

Harvest rAAV-ZFP viral particles each containing a single library member

First the first than the first than
